The Rejections

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 to 4, 9 to 12 and 17 to 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Su 1,680,810.

The Su 1,680,810 reference teaches a czochralski apparatus and method. There is a susceptor placed in a chamber. A crucible sits inside of the susceptor and contains a melt. There is a heating means and a seed pulling means. Further, a ring is placed over the tops of the susceptor and crucible, note figures.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 1765

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 5 to 8 and 13 to 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Su 1,680,810.

The Su 1,680,810 reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the material of construction and susceptor construction. However, in the absence of unobvious results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable susceptor construction and materials used in the Su 1,680,810 apparatus in order to prevent impurities in the melt and cracking of the susceptor.
